5.3 FTTH Service Level Definitions

Service levels for the FTTH Network are divided into two levels based on the nature of the faults, with the understanding that the Service is intended solely for home use:

(i) **Serious Faults**

Serious faults are faults that cause a Customer to still be completely offline after all remote, first line diagnostics have been completed. Events of Force Majeure, Customer caused damage, as well as negligent or malicious damage by third parties, may be excluded from this service level.

(ii) **Minor Faults**

Minor faults are faults that cause service impairment in the quality of the Services. With minor faults, the Services remain connected, operational and usable, but materially lower than the agreed quality parameters on the fibre, after all remote diagnostics have been completed. Wi-Fi issues are expressly excluded from the service levels for minor faults, due to the lack of control over Customers' Wi-Fi use and physical environments.
